DETAILED ACTION

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Allowable Subject Matter

Claims 1-39 are allowable.

The following is an examiner's statement of reasons for allowance: Claims 1-39 are allowed over the prior art of record. The prior art fails to teach or suggest a method and an apparatus for decoding biphasemark encoded data that implement a receiver module; a buffer; an audio module; and a processor module that coupled to the receiver module for executing a software based frequency locked loop that uses the timing information from the receiver module to calculate a sampling frequency of the input stream and then adjusts a frequency of the programmable lock to substantially match the sampling frequency so that the audio out module reads the decoded from the buffer at substantially the same rate that the receiver module inputs the decoded data into the data buffer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited References

The prior art made of record and not replied upon is considered pertinent to application's disclosure. The cited references relate to method and system for decoding biphasic-mark encoded data.
